Disputes over the Pacific Continent

By Albert Beha

On the Ides of March at 1:00 in the morning, an I-Kiribati fisherman happened upon a new continent found in the middle of the Pacific Ocean. It was caused by 3 previously unknown underwater supervolcanoes that exploded and regurgitated obscene amounts of lava. This cooled into a landmass extremely fast, along with the process of succession. By the time the world was informed, it was a continent full of amazing resources, plants and animals.

This is the greatest phenomenon of all history. You would be a fool to ignore an opportunity. However, the New Netherlands is very isolated. This is why our king, King Willem Alexander has decreed that the Pacific Eruptive and Windmill Project (PEWP) shall be put underway. By dropping a nuclear warhead into strategically located volcanos in the ring of fire, it is likely that the immense pressure build up will cause an eruption. Then, we put aircraft carriers fitted with massive fans to gently blow the lava into a line, going toward the New Netherlands. When the lava cools, we will have a structurally sound path from a volcano near discovered land to the new island.

However, before any of this would ever work, we need an in depth analysis to see how only 3 volcanos can make a whole continent, and how it was succeeded so quickly. Then, we won't have to waste a nuclear warhead for only a relatively tiny squirt of magma. There is a strange mineral in the continent linked to the rapid succession, and we need to find out what it was to make the PEWP a usable thing.

We also need to analyze the copious amounts of lava that erupted from the supervolcanos. Not even Krakatoa, one of the largest volcanic events in history, even compared to this. We need to harness all of the lava if we want to make the PEWP a reality.

On the topic of Krakatoa, the eruption caused an intense ecological disaster unlike anything the world had ever seen. Its effects were felt as far as Norway, where it is speculated that the sky turned red.

The Dutch were in charge of the Krakatoa disaster. It only makes sense that we will be in charge of this new continent. If anyone knows the most about new land coming from the ocean, it should be us and our experts.
